

Business Requirement Document (BRD)

1. Business Overview

The **Men's Shopping Mart – E-Commerce Database Management System** is designed to manage the daily operations of an online men's fashion store through a centralized database. The system stores customer details, products, categories, suppliers, inventory, orders, payments, shipments, and customer reviews. It helps improve business efficiency by reducing manual work and maintaining accurate records.

2. Business Objectives

The main objectives of the system are:

- Develop a centralized database for store operations.
 - Maintain accurate customer information.
 - Manage products and categories efficiently.
 - Monitor inventory and stock availability.
 - Process customer orders quickly.
 - Record and track payments.
 - Monitor shipment and delivery status.
 - Store customer ratings and reviews.
 - Reduce data redundancy.
 - Generate business reports.
 - Improve overall operational efficiency.
-

3. Business Requirements

Customer Management

- Register new customers.
- Maintain customer profiles.
- Store customer information securely.

Product Management

- Manage product information.
- Organize products into categories.
- Update prices and stock quantities.

Supplier Management

- Store supplier information.

- Maintain supplier contact details.

Inventory Management

- Monitor stock availability.
- Update inventory after orders.

Order Management

- Create customer orders.
- Store order information.
- Maintain order details.

Payment Management

- Record payment information.
- Track payment status.
- Maintain payment history.

Shipment Management

- Store shipment details.
- Track delivery status.
- Maintain delivery address.

Review Management

- Store customer ratings.
- Record customer feedback.

Reporting

- Generate business reports.
- Support business decision-making.

4. Purpose of Each Core Entity

Entity	Purpose
Customer	Stores customer details such as Customer ID, Name, Email, Mobile Number, Address, and Registration Date.
Category	Stores product category information.
Product	Stores product details including price, stock quantity, and category.
Supplier	Stores supplier information for product supply.
Order	Stores customer order information.

Entity	Purpose
Order Details	Stores ordered products, quantity, and unit price.
Payment	Stores payment details and payment status.
Shipment	Stores shipment details and delivery status.
Review	Stores customer ratings and product reviews.

5. Stakeholders

Stakeholder	Responsibilities
Customer	Registers, places orders, makes payments, tracks orders, and submits reviews.
Administrator	Manages customers, products, suppliers, inventory, orders, and reports.
Supplier	Supplies products to the store.
Warehouse Staff	Updates inventory and prepares orders for dispatch.
Delivery Staff	Delivers products and updates shipment status.
Finance Team	Records and verifies payments.
Management	Reviews reports and monitors business performance.

6. Functional Requirements

The system shall:

- Register customers.
 - Maintain customer information.
 - Manage categories and products.
 - Maintain supplier records.
 - Track inventory.
 - Process customer orders.
 - Maintain order details.
 - Record payments.
 - Track shipments.
 - Store customer reviews.
 - Generate business reports.
-

7. Non-Functional Requirements

The system should provide:

- Security

- Reliability
 - Performance
 - Availability
 - Data Integrity
 - Scalability
 - Maintainability
 - Backup and Recovery
 - User-Friendly Interface
 - Compatibility
-

8. Project Scope

The system includes:

- Customer registration and profile management.
 - Product and category management.
 - Supplier management.
 - Inventory tracking.
 - Order processing.
 - Order details management.
 - Payment management.
 - Shipment tracking.
 - Customer review management.
 - Business report generation.
 - Centralized database management.
-

9. Expected Business Benefits

The proposed system will provide:

- Centralized data management.
 - Reduced data redundancy.
 - Improved inventory control.
 - Faster order processing.
 - Accurate payment tracking.
 - Better shipment monitoring.
 - Enhanced customer satisfaction.
 - Improved business reporting.
 - Increased operational efficiency.
-

10. Conclusion

The **Men's Shopping Mart – E-Commerce Database Management System** provides a centralized and efficient solution for managing the core operations of an online men's fashion store. The system integrates customer management, product catalog, inventory, suppliers, orders, payments, shipments, and customer reviews into a single database. This Business Requirement Document (BRD) serves as the foundation for the Software Requirement Specification (SRS), database design, ER modeling, SQL implementation, and future system enhancements.
